

CUSTOMWEST

Introducing the “Simply better” shutter range equally at home in contemporary or traditional interiors.

Custom-made shutters...

Shutters have long been the window treatment of choice because they offer so much more in terms of privacy, ventilation and light control.

We are committed to following stringent quality control procedures to ensure that our products are continuously made to the highest standards, with excellent value for money guaranteed across our entire range. Avail of our expert measuring and installation service or if your DIY skills are up to scratch, you may choose to fit yourself.

innovative

Shutter Range

The Vancouver

Made from Western Red Cedar, Vancouver is available in painted, lacquered or oiled finishes. The “oiled” finish option provides the most natural appearance of any shutter available and is the natural choice for barns and warehouse conversions. The timber is so durable and stable it could be left outside untreated due to its resin content.

The Portland

Our Portland shutter range's smooth and consistent grain, make it a very robust and high quality hardwood. Strengthened with an engineered core to prevent any possibility of warping, they are well suited to areas where extra durability is required either around the home or for commercial premises.

Boston

Crafted from solid Basswood, Boston is a competitively priced hardwood and a popular material for shutters. Initially available in limited styles and three white shades with the introduction of limited stain colour options over time.

The Phoenix

Although a hardwood it is also very light enabling us to confidently use Phoenix for large (tier on tier) installations where weight would definitely preclude the use of Seattle or similar weight hardwood shutter panels. The almost white timber stains to match most timbers accurately while the grain reminiscent of oak, appears rich and exuberant even when painted.

The Seattle

An engineered product comprising of the best off-cut timber, which is bound and laminated with epoxy to form a light, durable lumbar core in a choice of three extremely durable white finishes. Maintenance free and very strong, with a wipe clean surface, this range is popular for its budget price but premium looks.

Bathroom Shutter Product

Ideal for harsh environments such as wet rooms, showers or conservatories, anywhere really that needs a tough but good looking window treatment that will last. The new closed-cell composite shutter technology ensures superior strength, stiffness and wont warp, dent or chip.

Colours

Choose from our extensive colour palette including paints, stains or a customised colour matching service to match your room décor.

Solid Shutters

Used extensively over the last couple of centuries in the UK, solid shutters offer better control over light filtration.

Solid shutters are fitted in the same way as louvre shutters and are used a lot for folding/concertina tracked partitions and they make very good quality, light folding doors.

Solid Raised

12mm thick centre panels with 28.6mm x 40mm stiles. Now with rebated top and bottom rail options for tier on tier for even less light infiltration.

Shaker

Shaker with Insert

Solid Base/Louvre Top

As solid raised but with top louvres, very suitable for sliding partitions and French Windows with solid bases.

French Door Cutouts

Fitted on the door itself, used for inward opening glazed doors, typically with Juliet balconies.

Conservatory

Conservatory shutters, apart from looking great, offer a great deal of flexibility simply not possible with most other shading options. Unlike fabric based shading systems, shutters will not rot, sag or age perceptively and are easy to clean.

Plantation Shutters can be used on the sides as well, for long sections they can be mounted on tracking to slide away when not in use.

Shutters are also used for partitioning and as multi fold internal doors. Quite often the opening to the conservatory may have shutters suspended on a top track. The solid base and louvre top shutters are used extensively for these applications.

Perfect Tilt

Motorised Interior Plantation Shutters

No More Stetching The days of balancing on chairs and tip-toeing to those hard to reach openings are gone, sit back and relax all day long and as the light changes simply open and close your shutters using your handy remote control. Not only beneficial to conservatory owners, they can also be incorporated into special shaped shutters, such as triangular apex windows.

Light Fantastic

These shutters offer 8 tilt positions allowing the perfect amount of light into your room. Each shutter panel can be controlled individually, as apart of a group or for total natural daylight, the whole installation can be moved together, making quite an impressive display!

Shhhhhhhhhhhhh!

With a virtually silent and smooth operation no one will be disturbed whatever time day or night. Perfect Tilt works as a single louver driven by a 9 volt battery powered motor via a light receptor on the frontside of the panel, the other louvers are driven by the tilt rod. Each motor operates up to a maximum louver height of 1800mm.

Fitting

The safest way to fit shutters is to let us fit them, however you can fit them yourself with reasonable DIY skills, assuming you have understood all the design and fitting options and then measured correctly. There are many ways to fit shutters and there is no one way that is better than another. You may fit them inside the reveal, the most common way, or on the edge of the reveal or outside the reveal, all are permissible methods. The room will generally dictate the fitting location. Frames are used extensively for fitting but may not be suitable for severely out of square

openings, (most openings in older houses are not perfectly square). Shutters are made square unless specially shaped and will not hide a subsided bay window or tilted window sill entirely. Our hinges are made especially for our shutters and our screws are made specifically for our hinges with matching screw heads. Either match or contrast hinges to shutters, sometimes odd combinations work very well, bisque hinges with silk white panels for instance. For wet environments it is recommended that our marine grade stainless steel hinges are used.
