

# Freedom

Wireless battery powered motors by Somfy

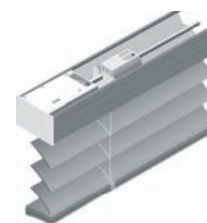

# Wireless motors Limitless possibilities

The Somfy range of wireless motors make it possible to power venetian and roller blinds without the constraints of an electric power supply. Operating with long-life batteries, Somfy wireless motors allow you the freedom to bring your creations to life.

**Battery powered tilt motor:** Integrated in a 50mm headrail to tilt venetian blinds weighing up to 15kg. Blinds can be adjusted with accuracy and precision to regulate natural light.

**Battery powered roller:** The wirefree tubular motor is suitable for roller blinds up to 5M<sup>2</sup>.

## Freedom

Somfy wireless motors allow you to automate blinds with total freedom.

## Harmony

With no wiring required, you can install shading solutions with no disturbance to the room decor.

## Long lasting autonomy

Battery lifetime has been optimised but is of course determined by the frequency of use and amount of radio activity in and around the home. See installation instructions for further guidance.

## Easy to install

The roller motor incorporates an electronic limit switch unit for simple setting and no supply wiring results in rapid installation, saving you time.
